

Colasse

Engineering the Future

LED Lighting • Energy Performance

> “Our technical expertise is matched by the commitment of the people behind it, ensuring the highest level of care and attention throughout every project.”

Manuel Colasse
Managing Director

20+ years of experience

2 complementary areas of expertise

1 single point of contact

100 % adaptable solutions

Certified B Corporation

vca commitment, safety & quality

Rooted in Belgium and France. Reaching markets worldwide.

Why entrust your most demanding projects to us?

A holistic approach

We look at every project as a whole to identify the solution best suited to your applications, constraints and objectives.

Mastery of complexity

We bring together technical, energy and operational requirements without compromising on quality, safety or performance.

End-to-end project management

From engineering through to commissioning, a single point of contact coordinates every stage of your project.

Independence as a guarantee

We are free to select the technologies and partners that are best suited to the specific requirements of each project.

Proven expertise

For more than 20 years, we have supported national and international companies and organisations operating in some of the most demanding technical environments.

Long-term commitment

Our commitment goes far beyond commissioning. We remain by your side to help preserve the efficiency and performance of your installations over time.

The most demanding projects deserve more than a solution. They deserve a partner who understands and manages their specific requirements.

Every project comes with its own set of challenges, from operational continuity and energy performance to regulatory and budgetary constraints, safety requirements and team coordination. It therefore requires a thorough understanding of its technical, energy and operational challenges.

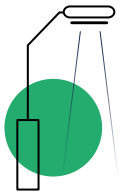

This is precisely the way **Colasse SA** has been operating for more than 20 years. We support public and private organisations in designing and implementing LED lighting and energy performance solutions, adapting our approach to the specific requirements of each project, from standard to fully customised.

We operate across a wide range of environments, from standard applications to highly demanding and complex projects, where reliability, performance and energy efficiency are critical. Our value extends well beyond supplying equipment: it lies in our ability to understand the challenges involved, make the right technical choices and ensure their successful implementation.

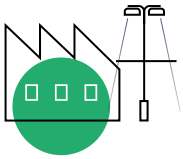

Horticulture

Under its **Vegeled™** brand, **Colasse SA** is recognised as one of Europe's leading horticultural lighting specialists. We work with research centres, universities, growers and local authorities to design solutions tailored to greenhouses, growth chambers, vertical farming and other controlled environments, where strict standards apply to light quality, reliability and performance.

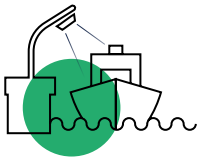

Public & private buildings

From schools and assembly shops to sports centres, warehouses and production sites, every environment comes with its own lighting requirements. Under its **Fortelumia™** brand, **Colasse SA** designs robust, high-performance and durable lighting solutions adapted to the specific uses, technical constraints and objectives of each project. Our teams are also experienced in working in occupied facilities while ensuring minimal disruption to ongoing operations.

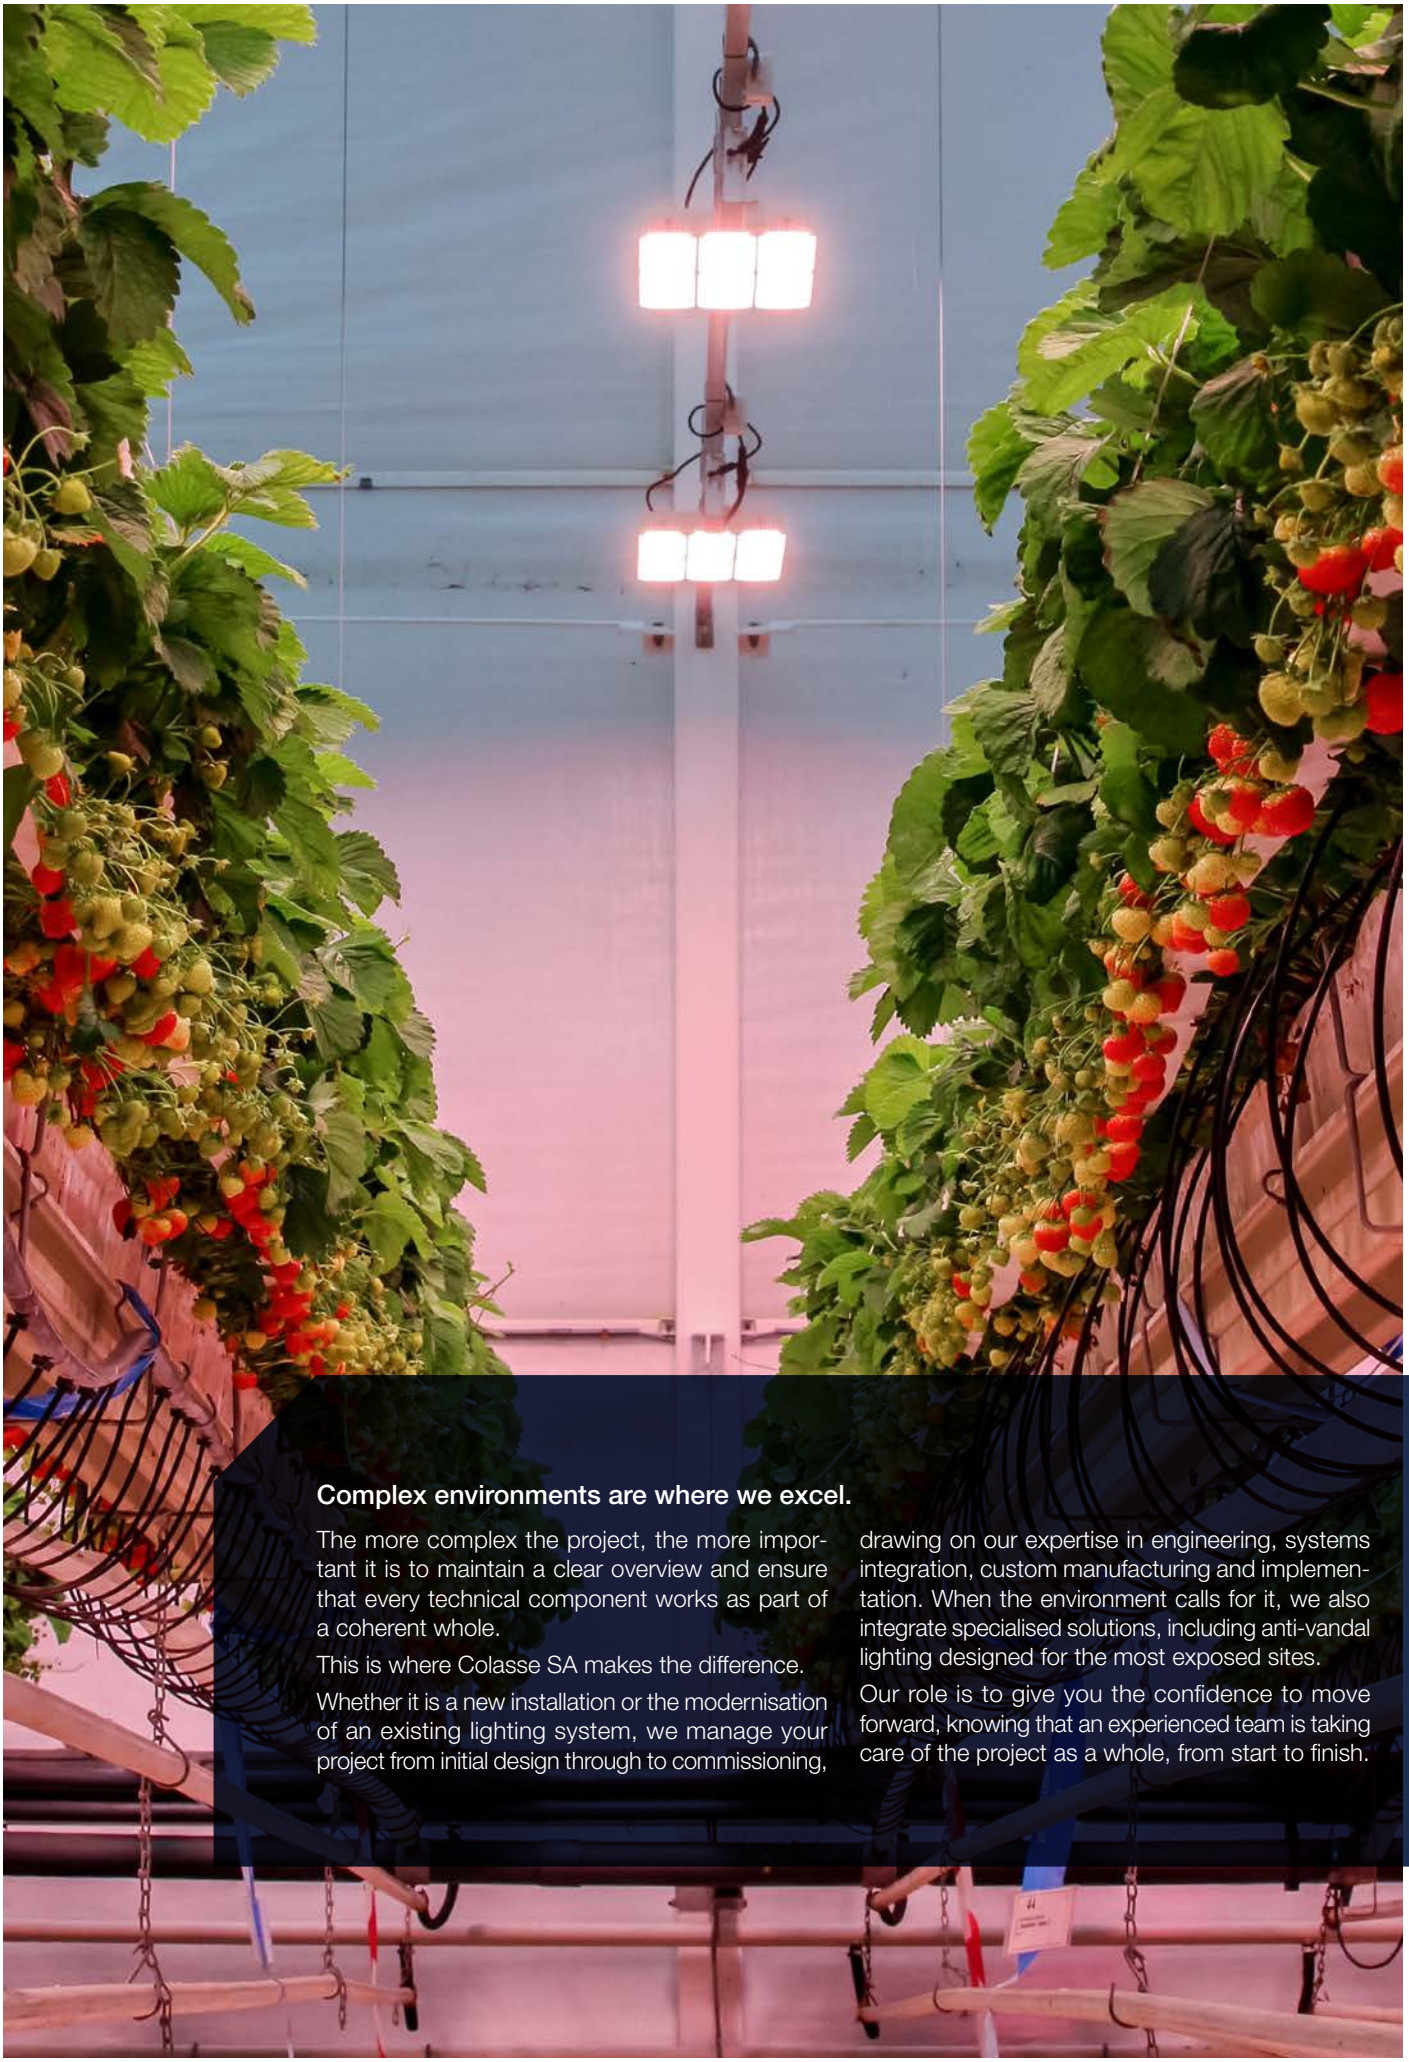

Industrial environments

Precision, worker safety, production continuity and demanding operating conditions require lighting solutions that are carefully engineered and controlled. Under its brands **Spotled™** and **Fortelumia™**, **Colasse SA** delivers the right quality of light for every application, whether for production, assembly, inspection or technical areas.

Ports & rail infrastructure

High mounting heights, large areas to cover, challenging weather conditions, safety requirements and operational continuity are all critical considerations when designing lighting for ports and rail infrastructure. Under its **Spotled™** brand, **Colasse SA** delivers solutions worldwide for projects subject to demanding technical and operational standards, providing robust, high-performance systems tailored to the specific requirements of each site.

Complex environments are where we excel.

The more complex the project, the more important it is to maintain a clear overview and ensure that every technical component works as part of a coherent whole.

This is where Colasse SA makes the difference.

Whether it is a new installation or the modernisation of an existing lighting system, we manage your project from initial design through to commissioning, drawing on our expertise in engineering, systems integration, custom manufacturing and implementation. When the environment calls for it, we also integrate specialised solutions, including anti-vandal lighting designed for the most exposed sites.

Our role is to give you the confidence to move forward, knowing that an experienced team is taking care of the project as a whole, from start to finish.

Two areas of expertise. One shared ambition.

Energy challenges go far beyond lighting. To improve the long-term efficiency of a building or facility, it is now essential to understand, measure and manage its energy consumption as a whole. This is why **Colasse SA** has naturally expanded its expertise into energy performance.

Because better understanding the way an installation works means being able to operate it more efficiently, make better investment decisions and prepare for its future evolution.

Energy audits, monitoring & management

We help you understand the real energy costs of your installations, track consumption, identify inefficiencies and make better-informed decisions, using solutions such as those developed by our partner **Ewattch™**. The data gives you the insight you need to optimise usage, measure results, prioritise investments and achieve lasting savings.

Electrical engineering solutions

From electrical distribution boards to EV charging stations, batteries, photovoltaic systems and control solutions, we help you integrate the most relevant equipment to reduce your carbon footprint and move towards a more autonomous, efficient and responsible approach to energy management.

We never choose the easy option.
We choose the solution that fits best.

At Colasse SA, we operate where the reliability of installations, their energy performance and operational continuity cannot be left to chance.

This is where our technical expertise makes all the difference.

As a fully independent company, we select the technologies and partners best suited to each project. We design reliable, high-performance solutions built to last, and we continue to support you long after commissioning.

For the success of a project is measured over time, when performance continues to deliver year after year.

Expertise is built **over time**.

Excellence comes from **experience**.

Passion drives **everything** we do.

The right solution starts with a clear understanding of your project.

Let's talk.
